

STONE GROUP

ARCHITECTS

Founded in 2012, Stone Group Architects is a full-service architectural design firm serving the Midwest and beyond. As a Service-Disabled Veteran-Owned Small Business (SDVOSB), SGA ranks among the top 10% of SDVOSB architecture firms in the U.S.

We provide strategic, high-impact design solutions nationwide, specializing in Veterans Affairs and military projects, from hospitals to training facilities. Our diverse portfolio spans healthcare and wellness, education, municipal, historical restoration, and private club development, backed by an experienced team dedicated to excellence. With offices across the Midwest, Stone Group Architects is committed to positively impacting people and place—one project at a time.

SIouxLAND EXPO CENTER

We had a great partnership working with Stone Group on the Siouxland Expo Center project. I appreciate their willingness to work along side of us throughout the design process. Their attention to detail and quality control led to a facility that has become a tremendous asset to Siouxland.

Matt Salvatore, Parks & Recreation Director

UEI: VE2FCNEZ9V9 CAGE: 714F5

Stone Group Architects is a Service-Disabled Veteran-Owned Small Business with Midwest roots and a national reach. With offices in Sioux Falls, SD; Rapid City, SD; Fargo, ND; St. Paul, MN; and Sioux City, IA, we bring a client-focused, user-centered approach to every project. We take pride in serving our nation's veterans and active-duty military by creating healing environments and functional facilities that empower users to perform at their highest potential.

Our team delivers a broad range of architectural services, specializing in government and healthcare environments that help people excel at what they do best. We've built lasting partnerships with federal clients across the country, grounded in trust, performance, and proven results.

CAPABILITIES

SPECIALIZED HEALTHCARE EXPERTISE

Healthcare design requires more than technical skill. It takes a deep understanding of complex systems, strict regulations, and the needs of both patients and providers. Our team has completed dozens of healthcare projects nationwide, with a strong focus on Veterans Affairs Medical Centers and federal healthcare facilities. Partnering with top healthcare engineering consultants, we deliver integrated, forward-thinking solutions that support healing, safety, and long-term performance.

TECHNOLOGY-DRIVEN PRECISION

We use 3D laser scanning, 360° cameras, and advanced modeling software to capture existing conditions with precision. This technology reduces site visits, minimizes errors, and accelerates timelines, saving time and cost. Our portfolio includes over 600,000 SF of VA Medical Centers, including complex MEP spaces and full-campus projects. Visuals and animated walkthroughs improve communication and support confident design approvals.

PROVEN TEAM COLLABORATION

Our firm has built a dependable network of experienced consultants through years of successful collaboration on VA contracts. This established team brings consistency, clear communication, and deep institutional knowledge to every project. With trusted relationships already in place, we reduce onboarding time, streamline coordination, and deliver results efficiently and reliably, especially in complex federal healthcare environments.

SGA serves a broad range of federal clients nationwide. The map highlights our five office locations and shows our federal project sites across the country.

"...Overall the quality of the product has been very good....this AE has done a very good job of capturing all comments from meetings/reviews and incorporating them into the design as required. It is clear that products are reviewed prior to being sent to the VA...Overall, in the last 8 years as a COR, this is probably the best product I have received at this stage."

- Jeanette Mathena, Contracting Officer, NCO 15

"Stone Group Architects is an excellent firm that completes quality designs on time and on budget. This vendor is readily available to stakeholders for dialogue and actively works to solve problems in advance. I highly recommend this firm for future Government work."

3D SCANNING SERVICES

Accurate Data. Smarter Design. Confident Delivery.

Stone Group Architects leverages 3D laser scanning and 360° imaging to capture high-resolution site data, enhancing documentation, planning, and design coordination. As a Service-Disabled Veteran-Owned Small Business with national reach, we bring a user-centered approach to every project—delivering fast, precise results that reduce errors, accelerate timelines, and empower confident decision-making on jobs of any scale.

FAST & PRECISE SCANNING

Capture every architectural detail in minutes with handheld 3D scanning. High-resolution site data reduces guesswork and ensures confident, coordinated design decisions.

SMART DATA PROCESSING

Advanced point cloud extraction converts raw scans into usable intelligence. It's ready for design decisions.

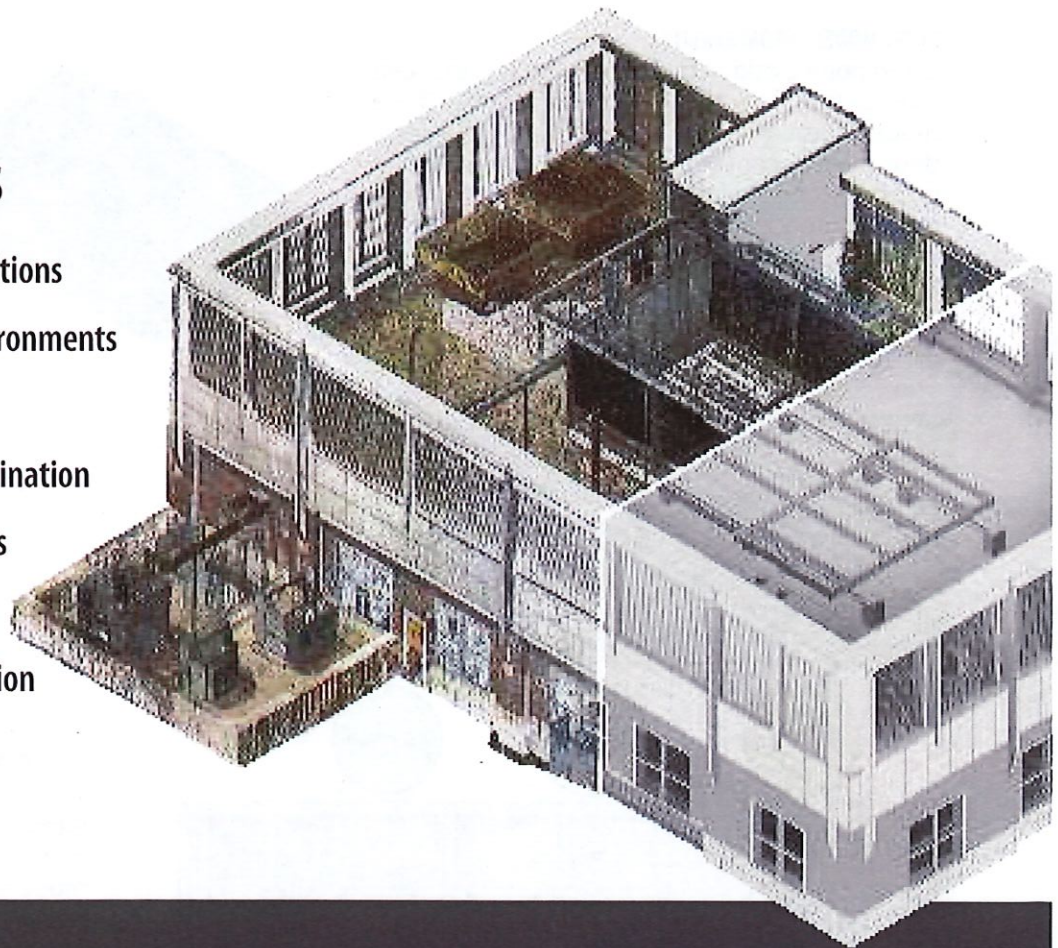

DESIGN READY ASSETS

Coordinated Revit files are delivered fast. They support collaboration, reduce errors, and accelerate progress.

SERVICE ADVANTAGES

- ✓ Accurate Existing Conditions
- ✓ Supports Complex Environments
- ✓ Fewer Site Visits
- ✓ Improved Design Coordination
- ✓ Faster Project Timelines
- ✓ Reduced Costly Errors
- ✓ Enhanced Communication
- ✓ Supports Future Needs

CONFIDENCE FROM THE GROUND UP

Utilizing a 3D scanner delivers critical benefits that enhance project efficiency, communication, and cost control. One of the most impactful advantages is its ability to precisely capture structural, plumbing, mechanical, and electrical elements, information that's especially valuable in complex spaces like mechanical rooms and boiler plants. By generating highly detailed point clouds, our consultants can create accurate as-built drawings with confidence, reducing rework and improving coordination from the very start of the project.

POINT CLOUD PRECISION

Point clouds provide highly detailed digital representations of existing conditions, with accuracy up to 1.9mm. This technology allows teams to measure and verify structural and MEP elements remotely, reducing the need for repeat site visits and minimizing disruption. Compared to traditional hand measuring methods, point clouds significantly accelerate the creation of accurate as-built models and improve downstream coordination.

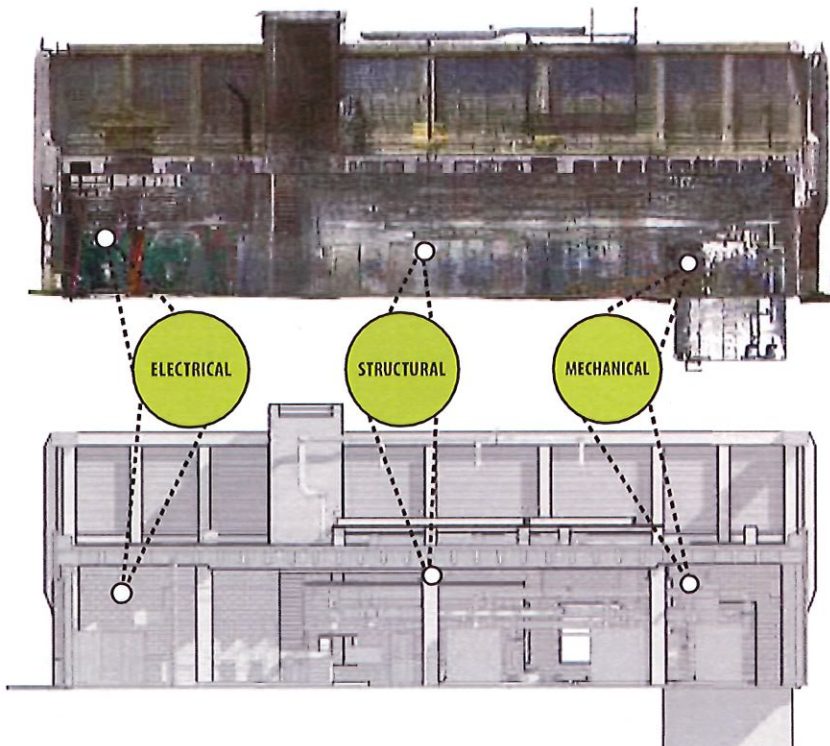

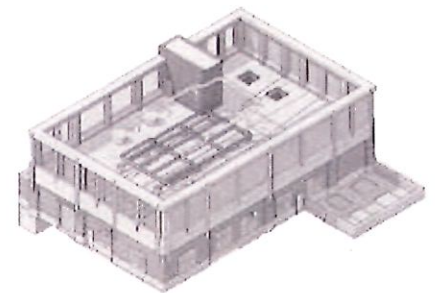

REVIT MODELS FROM REALITY

Using point cloud data, we develop precise Revit models that reflect real-world conditions. These models form a reliable foundation for planning, design, and consultant coordination ensuring greater accuracy, fewer conflicts, and improved collaboration between disciplines. This process streamlines documentation and helps project teams move forward with confidence.

This Revit model demonstrates our ability to create accurate digital twins of existing structures, improving interdisciplinary collaboration and design efficiency.

INTEGRATED WORKFLOW

The graphic highlights the coordinated integration between Stone Group Architects and our engineering consultants. SGA modeled key architectural elements such as walls, windows, doors, and the roof deck using point cloud data. Consultants then built the mechanical, electrical, and plumbing (MEP) systems within the same data environment, ensuring precise alignment, spatial accuracy, and streamlined collaboration throughout the modeling process.
